Ramin Rezaei

Senior Software Engineer, Web Development

Malmo, Sweden | +46-762433001 | Ramin.Rezaei77@gmail.com | RaminRezaei.se | LinkedIn.com/in/raminr77 | GitHub.com/raminr77

SUMMARY

Senior Software Engineer with **8+ years of experience** across the **full web development stack**, from front-end and UI to backend services, APIs, and distributed systems architecture, building features for products used by **tens of millions of people**. I work closely with product and design teams to take features from idea to launch, with a strong background in **JavaScript**, **TypeScript**, and **React** on the front end, and **Node.js**, **Java**, and **Kotlin** on the backend. I care about accessibility (**WCAG** audits, **ARIA**, semantic HTML, keyboard navigation), and I've done hands-on work with real-time, low-latency video and audio over **WebRTC**. One of my personal projects hits **sub-500ms end-to-end latency**, the kind of problem Google Meet solves at scale. I'm comfortable leading design reviews and weighing technical trade-offs with stakeholders across a team.

SKILLS

Programming Languages: JavaScript, TypeScript, Python, Java, Kotlin

Frameworks & Technologies: React, Next.js, NestJs, Node.js, Spring, REST APIs, Microservices, WebRTC

Accessibility: WCAG audits, ARIA attributes, semantic HTML, keyboard navigation and focus management

Databases: SQL (MySQL), NoSQL (MongoDB), Firebase, Google Cloud Platform for DB

Systems & Cloud: Distributed Systems, System Design, Kubernetes, Google Cloud Platform (GCP), Amazon Web Services (AWS)

Testing & Tools: Data Structures & Algorithms, End-to-End Testing (E2E), A/B Testing, Git, CI/CD, Docker, Sentry, DataDog, Grafana

EXPERIENCE

Software Engineer, Sinch

Malmo, Sweden | May 2025 - Present

- Improved frontend performance and Lighthouse scores across several projects, and helped build and maintain the shared UI libraries used across a **100+ micro-frontend** architecture. Took part in design reviews to help decide on frontend technology choices.
- Led an end-to-end testing initiative and set up observability dashboards with **Grafana** and **Prometheus**, making it much easier to see and diagnose issues across the system.
- Speed up our internal dashboards by optimizing frontend rendering, cutting down unnecessary re-renders, and adding caching and streaming on the backend API.
- Built an internal **MCP** (Model Context Protocol) server for the Account & Access domain that connects AI-driven tooling across internal services. It **won an internal engineering competition** and later became a partnership integration.
- Contributed to BFF services in **Kotlin** and to CI/CD pipelines (Helm, Kubernetes) inside a large microservices setup built on Kafka and Istio.

Senior Frontend Engineer, Boozt

Malmo, Sweden | Aug 2023 - Apr 2025

- Built and scaled a CMS platform that generates dynamic web pages, promotions, and campaign pages for **17 countries**, working closely with content, marketing, and design teams and leading design reviews on technical approach.
- Implemented accessible UI patterns (**ARIA** attributes, semantic HTML, keyboard navigation) across CMS components and led **WCAG** compliance audits, making the platform more usable for people relying on assistive technology.
- Led the migration to **React** and **TypeScript**, and optimized the frontend architecture to cut down re-renders and improve load times and overall user experience.
- Built a translation service using Google's AI tools to automatically localize CMS content across languages and regional stores.
- Contributed to CI/CD, code reviews, and automated testing (unit, integration, E2E), and built an ML-powered image processing system with **TensorFlow.js** to classify, cluster, and auto-process product images.
- Set up serverless automation on GCP Cloud Functions and built an internal asset management system with a **Node.js** backend API, cutting dependency on external services and reducing operational overhead by around **10%**.

Software Engineer, Senior Frontend Engineer, Digikala

Tehran, Iran | Aug 2020 - Aug 2023

- Helped rebuild two large-scale e-commerce platforms (**React**, **Next.js**, **TypeScript**) in agile teams, working directly with product managers and designers on user-facing features. These platforms served over **40 million** active users and **12 million** unique visits a day.

- Pushed for better web accessibility across the platform: implemented semantic HTML and **ARIA** attributes for screen reader support, made sure the UI was fully keyboard navigable, and took part in accessibility audits for a high-traffic consumer product.
- Led the campaign engineering team for a year and designed a dynamic landing page system with **30+ reusable modules**, working closely with UX and marketing to cut down campaign development time.
- Improved backend performance by optimizing the algorithms and data structures behind our APIs, cutting response time by **10%** and query load by **5%**.
- Ran analytics and experimentation (Google Analytics, A/B testing) across **20+ simultaneous experiments** to better understand user behavior.
- Built and maintained automated testing pipelines (Jest, Cypress) and contributed to a micro-frontend architecture built with Nx inside a large PHP monorepo (Symfony).

Software Engineer, Frontend Team Lead, Snapp / SnappCarFix

Isfahan, Iran | Apr 2019 - Aug 2020

- Led and mentored a team of **5+ engineers**, driving delivery on cross-functional projects and leading design and technical reviews.
- Migrated a legacy WordPress platform to a modern React-based architecture, significantly improving the user experience.
- Built a reusable component library that cut development time and project setup by about **40%**.
- Improved performance by optimizing frontend features, reducing page load times by up to **20%**.

Software Engineer, Self-Employed / Freelance

Isfahan, Iran | Jan 2019 - Jan 2020

- Led the development of several products, from identifying system requirements and partner dependencies to workload balancing, software implementation, engineering, testing, and configuring metrics, alarms, monitors, and dashboards.
- Designed and implemented scalable RESTful APIs using Python (Django) and PHP (Laravel) for managing proprietary licenses, handling peak loads of **500 requests per second**, and ensuring **99.9% uptime**.

PERSONAL PROJECT

Falcon AI Platform, Autonomous AI Drone

- Designed and built a real-time, bidirectional video and audio system using **WebRTC** with **sub-500ms end-to-end latency**, the kind of low-latency infrastructure video conferencing products rely on.
- Built an AI-powered autonomous drone system with intelligent flight control, using **YOLO**-based object detection for obstacle avoidance and autonomous landing.
- Built a distributed architecture where a Raspberry Pi onboard the drone streams data to backend services for real-time processing and decision-making (6 services running on the Raspberry Pi, 8 on the server).
- Designed a high-performance frame processing pipeline using message queues to deliver near real-time inference and control signals.
- Secured communication between services with token-based authentication and VPN networking.
- Built monitoring and observability with **Grafana** to track system performance, latency, and reliability.
- Architected the system to be scalable and modular, separating streaming, inference, and control into independent services.

EDUCATION

Bachelor's Degree in Computer Software Engineering, Azad University (IAUN)

Isfahan, Iran | Nov 2017 - Nov 2021

- Conducted research on user behavior and UI optimization.
- Teaching Assistant for courses in Graphic Design and Database Systems.

OTHER

- **1st Place**, Code in the Dark Competition, Sweden (Nov 2024), for strong front-end skills under time pressure.
- Machine Learning in JavaScript (TensorFlow.js), Frontend Masters (Dec 2024).
